Work update

Stage one demolition works continue to progress as planned and are on track to be finished later this year, with around 80% of demolition now complete.

Following demolition of the stadium’s stands earlier this year, the team have been removing the foundations and ancillary buildings (the old Waratahs, Roosters and Sheridan buildings) to clear the site of all residual structures and footings.

Materials from the stadium’s foundations and buildings continue to be processed, sorted and progressively removed from site, or stockpiled in readiness for recycling.

Upcoming work

Work to demolish the Indoor Cricket Centre commenced in early September with internal strip out. Hard demolition works to the centre’s structure will take place from early October.

Stormwater diversion works will also take place later this year to relocate a Sydney Water asset in readiness for construction to commence.

Working hours

Construction works, including the delivery of materials to and from the site, will be carried out between the following hours:
— 7 am and 6 pm, Mondays to Fridays
— 8 am and 1 pm, Saturdays.
Procurement of a stage two construction contractor

Earlier this year the NSW Government made the decision to return to the market and find an alternate builder to deliver the second stage of the Sydney Football Stadium Redevelopment.

In August 2019, Multiplex and John Holland were announced as the two companies participating in a competitive tender process.

The winning bidder is expected to be announced later this year.

Infrastructure NSW will continue to work closely with Lendlease to finalise stage one works and prepare the site to be handed over to the new contractor.

Stage two planning – Response to Submissions Report

The Stage two State Significant Development Application (SSDA) was placed on public exhibition from 19 June to 24 July during which the public were invited to submit feedback to the Department of Planning, Industry and Environment (DPIE).

During the public exhibition period, 84 submissions were received from the general public, organisations and public authorities. Each submission was reviewed and responded to by Infrastructure NSW.

A copy of the Response to Submissions Report and accompanying documentation which addresses all issues raised and any changes to the stadium proposal can be found online on the DPIE Major Projects website: https://www.planningportal.nsw.gov.au/major-projects/project/10736.

A planning determination is expected to be received in late 2019.

Environmental monitoring

The project carries out noise, dust and vibration monitoring at specific locations around the site to record and monitor the progress of works. For detailed results of our environmental monitoring, please visit the library section of our website.
