Project Update – Stage 1 Demolition

• Total demolition is approximately 80% complete

• Demolition is near competition at the former Waratahs, Roosters and Sheridan buildings

• Demolition at the Indoor Cricket Centre commenced in early September with internal strip out. Hard demolition works to commence from early October

• Stormwater diversion works to take place later this year to relocate a Sydney Water asset in readiness for construction

• The site continues to be cleared of residual structures and footings
Project Update – Stage 1 Demolition Community Complaints

Register to August 2019

- One complaint received about high levels of dust on 7 September during weekend of wind gusts in excess of 100km/h.
- Lendlease implemented the following mitigation measures to suppress the dust:
  - A water ring main was installed around site to provide water points to manage dust suppression around site
  - Static water sprinklers were set at strategic locations to suppress dust at each workface
  - Specific demolition plant was fitted with pipework designed to disperse water at the machine attachment location directly at the point of demolition
  - Water tankers were also utilised on site to manage haul roads and general areas which are not currently under demolition
Next meeting

- Next meeting proposed for Wednesday, 13 November or Wednesday, 4 December
